

DW Minor Project Readme

(Pragya Dara MT19126, Swati Verma MT19073, Anamitra Maji MT19112)

1. Download and install Xampp version 7.2.28/PHP 7.2.28 inside C drive of your computer.
2. Open the control panel of Xampp and start Apache and Mysql. This will act as a local server for the computer.
3. Download all the php files and save these files inside C:\xampp\htdocs.
4. Download the group20.sql file in your system.
5. Open phpmyadmin in your browser and import the group20.sql file which contains all the tables used in our database.
6. Now open the browser and type localhost/directory_name/home.php. This will open the homepage of our project.
